

Laboratory staffing; Resourcing & Personnel Solutions

Friday, 11 July 2008

Require a solution to the skilled labour shortage in your lab?

Argon Resourcing & Personnel not only provide you with a highly skilled employee, you are gaining access to an entire engineering support team. This skill base and support is invaluable in today's market climate.

Argon Technology has the highest skilled personnel in the following fields:

Engineering

- Laboratory Engineers
- Lab Technicians
- Mechatronic
- Electrical
- Mechanical
- Chemical

Duties:

- Operate state of the art industrial robotics systems
- Perform maintenance tasks to ensure robotic systems operate at optimum capacity
- Fault find for system failures, planning resolutions & putting the plan into action
- Design, implement and oversee system upgrades and improvements

Minerals Processing

- Plant Metallurgist
- Chemist
- Chemist Assistants

Duties:

- Operate state of the art industrial robotics systems
- Perform maintenance tasks to ensure robotic systems operate at optimum capacity
- Perform general mineral processing activities
- Interpret analytical results & optimise system parameters to ensure top quality results

Graduates

- Mechatronic
- Electrical
- Mechanical
- Chemical
- Mining

Argon Technology is an established industry leader in the robotic and automation fields in Australia. We have taken this expertise and aligned this to providing industry placements to ensure companies benefit from this expertise, to take their processes and operations to the next level.

Move your business forward in industry today with Engineering Services by Argon Technology trained consultants.
