

Renewable Energy & Solar Power

Friday, 20 June 2008

Argon Technology building on its success with projects in the system and servicing of solar power products and power generation has marked this as a key growth sector and one as having core alignment with the organisations sustainability focus.

“Solar power as a green or carbon neutral power source linked with Argon Technology’s proprietary technologies have led to a focus on development of value adding, sustainable products to service an interesting and expanding industry.” Paul A. Deuchar, CEO, Argon Technology. For the past 2.5 years Argon has had a keen interest and development focus in the renewable and sustainable energy sector. Argon has developed capability and technology to service this industry with precision production machines and a soon to be released range of self powered solutions. To date Argon has currently been awarded 2 projects, for supply to this sector and looks forward to good market growth.
