

Industry Training

Argon Technology provides educational and accreditation courses on our systems and to the robotics, automation and control systems industry. These courses are designed to skill up operators and service personnel to a work ready level.

The industrial robotics, automation and control systems industry by its nature is inherently dangerous. Uneducated or uninformed activities around such machinery or equipment can be potentially catastrophic for all concerned. These courses are designed to increase the levels of competence and safety.

These courses can be operated out of a training facility and/or on the job site. They utilise the latest in advanced educational tools and ideologies.
